

Verifyle® is KGR Bookkeeping Services' secure portal to share documents and communicate with our tax clients, while taking every precaution to protect their data and identities. Please review KGR Bookkeeping Services' procedures and policies regarding the use of Verifyle® and other third-party applications.

About Verifyle®

Unlike many other cloud-storage and cloud-sharing apps, which use a single master key for encrypting and decrypting their users' data, Verifyle®'s Cellucrypt® technology uses password-derived keys on top of a public-key system to individually encrypt each data object with six unique keys, adding several additional layers of protection for their users. With the additional option to disable password reset, Verifyle® becomes the most secure file-sharing app available, whole remaining extremely simple to use.

Verifyle® delivers ultra-secure messaging and document sharing, all from a simple, intuitive patented user interface. Verifyle®'s industry-leading, patented encryption technology gives users the highest level of security, protecting them from bulk-access vulnerability through the unique encryption of each individual document and message thread. For more information regarding the security of Verifyle® visit <https://verifyle.com/security.html>

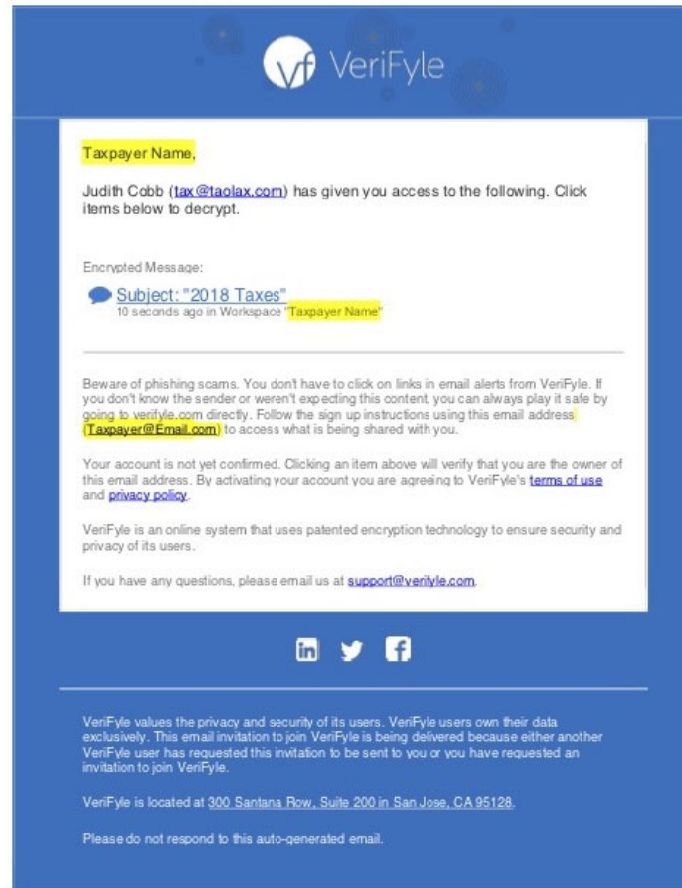

Verifyle® is in compliance with Part 1 (Protection of Personal Information in the Private Sector) and Part 2 (Electronic Documents) of the Personal Information Protection and Electronic Documents Act (PIPEDA). For more compliance information visit <https://verifyle.com/compliance.html>

How it Works

Hosts (KGR Bookkeeping Services) invite Guests (our clients) into Workspaces in order to view shared information. When a Guest is invited by a Host, the Guest will receive an email with a secure link that will take them straight into their own Verifyle® account where they will see what's being shared with them. It is extremely simple to use while maintaining the highest levels of security. For more information regarding how to use Verifyle® visit <https://verifyle.com/how-it-works.html>
